Description

The sensor of the Zirkon pH series are highly sophisticated sensors with a high value for money ratio. They are used in many applications e.g. industrial, process and waste water. We use our high performance AH glass with low alkaline error and a broad temperature range. We use a high class ceramic junction which increases the sensor life expectancy and our low maintenance Topax gel. As reference system we use a cartridge system which results for a constant measurement especially in applications with high temperature fluctuations.
